

# Fastcharge Charging Post

- Before you begin:
- Ensure that the unit is safe to use
  - Ensure the cable is plugged into the vehicle

## With RFID

### To start charging:

Place your RFID card or key fob on the red target situated above the screen. The screen will display a green tick.

The screen will tell you when to connect your vehicle.

Connect your cable to the appropriate socket.

Once the unit has recognised that you have connected your cable, the unit will lock your cable into place and the lights will change from flashing blue to green.

In the bottom corner of the screen, it will state 'Charging' and the top corner of the screen will display the energy provided.

### To finish charging:

Present your RFID card or key fob to the red target as before. The charging session will end and you will then be prompted to remove the cable.

## Without RFID

### To start charging:

In the 'Off' position the lights are yellow (for standby).

Connect your cable to the appropriate socket.

Turn the key into the 'On' position when ready to use and the lights will turn green.

### To finish charging:

To end the cycle - turn the key to the 'Off' position. The cable cannot be removed until the 'Off' position is engaged.

The unit can be left permanently on (with the key removed) when in a secure area and charging will only begin when a cable is correctly inserted, alternatively the unit can be turned off and the key removed for added security.
